Professional Summary

Principal engineer specializing in trading systems, execution infrastructure, market infrastructure, and distributed systems.

Built low-latency systems spanning liquidity ingestion, route evaluation, simulation, profitability analysis, transaction execution, settlement, and replay across decentralized trading environments.

Recent work includes Rust-based execution infrastructure evaluating 1000+ routes/sec across Ethereum, Base, and Unichain using streaming liquidity data, execution analytics, replay systems, and market simulation frameworks.

Core Technologies

Languages: Rust (3 years), Solidity (4 years), TypeScript (3 years), Go (2 years)

Execution Infrastructure: Liquidity Mapping, Route Evaluation, Simulation, Pricing, Profitability Analysis, Execution, Settlement, Replay, Strategy Analytics

Developer Tooling: Tycho, Substreams, Alloy, Foundry

Market Infrastructure: Intent-Based Execution, DEX Infrastructure, Cross-Chain Routing, Stablecoin Infrastructure, Transaction Processing

Infrastructure: AWS, Kubernetes, Docker, Postgres, MongoDB Atlas, Terraform, gRPC, Datadog, PagerDuty, CI/CD

Blockchain & DeFi Protocols: Ethereum, Base, Unichain, Harmony, Polkadot, Uniswap, SushiSwap, CoW Protocol, 1inch, UniswapX, Morpho, Aave

Professional Experience

Principal Engineer

2018 – Present

Independent Research & Development

Research, protocol development, fundraising, and consulting across blockchain infrastructure, execution systems, and DeFi protocols.

- **EAVE (2020–2022):** Built a Rust-based Polkadot parachain and DeFi protocol including validator infrastructure, protocol architecture, governance, tokenomics, developer tooling, and ecosystem design
- **EAVE (2020–2022):** Produced technical whitepapers, architecture specifications, investor materials, and secured approximately \$300,000 in investor commitments
- **DeFi Protocol Development (2025):** Designed and implemented lending, leverage token, auction-based rebalancing, and intent-based execution systems integrating Morpho lending markets, ERC-6909 resource management, and programmable settlement workflows
- **Solver (2025–Present):** Built Rust-based execution infrastructure evaluating 1000+ routes/sec across Ethereum, Base, and Unichain using Tycho, Substreams, Alloy, live liquidity ingestion, liquidity mapping, route evaluation, simulation, pricing, profitability analysis, execution, and settlement across fragmented liquidity venues

- **Solver (2025–Present):** Built and evaluated route graphs spanning 17,000+ tokens, 8,000+ liquidity pools, and 2.3M+ arbitrage routes with peak throughput exceeding 1,100 route evaluations per second and average evaluation latency of 424µs
- **Salus (2026–Present):** Designing a next-generation trading platform for historical replay, strategy analytics, profitability analysis, execution evaluation, and future CeFi/DeFi trading workflows
- **Salus (2026–Present):** Built graph and route generation systems spanning 3,400+ tokens, 4,500+ protocol components, 9,100+ liquidity edges, and 2.3M+ generated trading routes on Ethereum

Engineering Manager / Senior Protocol Engineer

Aug 2023 – Jan 2025

Eco Inc

- Delivered cross-chain routing, settlement, and transaction execution infrastructure across Ethereum and Layer-2 ecosystems
- Built and operated wallet, routing, proving, and payment services supporting the Eco stablecoin ecosystem
- Operated production AWS infrastructure using Kubernetes, MongoDB Atlas, Terraform, Datadog, PagerDuty, and CI/CD automation

Ecosystem Architect

Aug 2019 – May 2020

Harmony Protocol

- Supported launch of Harmony Mainnet, token swap, staking infrastructure, developer platform services, and validator ecosystem growth
- Coordinated 50+ production network upgrades, deployed 300+ nodes, and supported 600+ validators across distributed blockchain infrastructure
- Led APIs, SDKs, developer tooling, documentation, ecosystem integrations, and validator onboarding programs

Chief Technology Officer

Jul 2016 – Jun 2018

Loyyal

- Delivered private Ethereum and Hyperledger-based platforms supporting enterprise transaction processing and interoperability
- Designed API, integration, and transaction processing infrastructure supporting loyalty, payment, and enterprise partner workflows
- Owned technical delivery and partner success across IBM, Deloitte, Emirates Airlines, and CIBC partnerships

Earlier Experience

Enterprise Architect, Engineering Manager, and Founder across EFI, Autodesk, and Global Enterprise Solutions

- Built large-scale enterprise integration platforms spanning payments, logistics, ecommerce, licensing, and partner ecosystems
- Led architecture and delivery across 100+ enterprise initiatives
- Founded and scaled a consulting firm generating approximately \$800,000 annual revenue

Education

Bachelor of Science (Computer Science)

University of Queensland
