Profile

Principal software engineer specializing in Rust-based trading infrastructure, execution systems, and distributed systems. Over the past eighteen months I deliberately invested in mastering modern trading infrastructure, building execution systems, protocol implementations, and distributed platforms that complement more than two decades of experience delivering enterprise software, blockchain infrastructure, payment systems, and engineering leadership. I build these systems directly, where architecture, performance, and correctness matter.

Engineering Highlights

- Built Rust trading infrastructure supporting indexing, simulation, execution, replay, route evaluation, and strategy analysis.
- Built modular execution systems with deterministic runtime boundaries, queue-driven scheduling, and multi-chain processing.
- Consulted on DeFi leverage-token infrastructure, auction-based rebalancing, lending integrations, and protocol execution workflows.
- Built stablecoin payment infrastructure, cross-chain settlement, and wallet/routing/proving services.
- Built and documented production-quality systems through architecture case studies, implementation walkthroughs, and engineering portfolio.
- Led engineering teams and organizations, including an 8-engineer Eco team and Harmony engineering growth from 6 to 20 engineers.

Representative Engineering Work

Salus (Rust)	Modular Rust trading platform for indexing, simulation, execution, replay, strategy evaluation, and multi-chain execution infrastructure emphasizing deterministic execution, queue-driven scheduling, and clear runtime boundaries.	2025–Present
Seamless (Solidity/Rust)	Solidity and Rust components for leverage tokens, auction-based rebalancing, Morpho lending integrations, CoW Protocol requests, ERC-6909 accounting, and protocol invariant analysis.	2025
Eco	Stablecoin payment infrastructure, programmable money, cross-chain settlement, routing, proving, wallet services, and Layer-2 transaction execution.	2023–2025
1wallet (Solidity)	One-time-password smart contract wallet eliminating seed phrase management through cryptographic OTP authentication.	2022–2023
1ns (Go/Solidity)	ENS-style decentralized naming service for Harmony using Go and Solidity.	2022–2023
Kanga Finance (Solidity)	SushiSwap-inspired decentralized exchange implementing AMM pools, LP emissions, staking, governance, fee conversion, liquidity migration, and protocol administration.	2022–2023
EAVE (Rust)	Rust Polkadot parachain supporting DeFi applications, validator infrastructure, governance, tokenomics, runtime architecture, and technical whitepapers.	2020–2022
Harmony	Layer-1 blockchain infrastructure including mainnet launch, validator onboarding, staking, Solidity and TypeScript SDKs, Ledger integration, precompiles, APIs, and ecosystem tooling.	2019–2020
Loyyal	Enterprise blockchain (Ethereum (Private Permissioned) and Hyperledger Fabric (Go)), transaction-processing APIs (Go), Tokenization (Solidity and Go), Mobile App (Dubai Points) and partner integration platforms.	2016–2018
Enterprise Integration	Service-oriented platforms integrating SAP, Salesforce, payment systems, ecommerce, licensing, logistics providers, and external partner ecosystems.	1999–2016

Core Technologies

Languages	Rust, Solidity, Go, TypeScript, Python
Trading Infrastructure	Execution, simulation, replay, route evaluation, market data, strategy evaluation, MEV
Distributed Systems	Tokio, async Rust, streaming, graph processing, queues, Postgres, Docker, Kubernetes
Infrastructure	AWS, Terraform, CI/CD, Datadog, PagerDuty, MongoDB Atlas
Protocols	Ethereum, Base, Arbitrum, Unichain, Optimism, Polkadot, Harmony, Hyperledger
Tooling	Tycho, Substreams, Alloy, Foundry, ClickHouse

Engineering Portfolio

Engineering portfolio including architecture case studies, implementation walkthroughs, system design, and technical project documentation.

Career Experience

Principal Engineer

2018 – Present

Founder, Jincubator

- Built trading infrastructure, protocol architecture, DeFi systems, stablecoin infrastructure, and execution workflows.
- Developed Salus as a modular Rust trading platform supporting indexing, simulation, execution, replay, and strategy evaluation.
- Designed intent-solving workflows across The Compact, 1inch, CoW Protocol, Uniswap, UniswapX, and Uniswap v4 hooks.
- Built supporting projects including 1wallet, 1ns, Kanga Finance, EAVE, execution tooling, and architecture documentation.

Engineering Manager / Senior Protocol Engineer

Aug 2023 – Jan 2025

Eco Inc

- Led team of 8 engineers building stablecoin payment infrastructure, programmable money systems, routing, proving, wallet, and protocol services.
- Delivered cross-chain routing, settlement, and transaction execution infrastructure across Ethereum and Layer-2 ecosystems while recruiting engineers and managing delivery.

Ecosystem Architect

Aug 2019 – May 2020

Harmony Protocol

- Supported Harmony Mainnet launch, token swap, staking infrastructure, APIs, SDKs, validator tooling, and ecosystem integrations.
- Coordinated 50+ production network upgrades, deployed 300+ nodes, supported 600+ validators, and scaled engineering from 6 to 20 engineers.

Chief Technology Officer

Jul 2016 – Jun 2018

Loyyal

- Led distributed teams building enterprise blockchain, loyalty, transaction-processing APIs, Hyperledger, private Ethereum, and partner integration platforms.

Earlier Experience

Enterprise Architect / Engineering Manager / Founder — EFI, Autodesk, Global Enterprise Solutions

- Built enterprise SOA platforms spanning SAP, Salesforce, licensing, ecommerce, payments, logistics, and partner systems.
- Led architecture across 100+ enterprise initiatives, managed \$3M+ planning portfolios, and founded consulting firm generating approximately \$800K annual revenue.

Education

Bachelor of Computer Science, University of Queensland
